

Academic Management System (AMS) – Project Report

1. Project Title:

Academic Management System (AMS)

2. Abstract:

The Academic Management System is a web-based platform designed to simplify and digitalize administrative activities in educational institutions. It manages student admission, attendance, marks, timetable, fees, and notices with an automated and efficient system. The software reduces errors, saves time, and ensures transparency among students, teachers, and administrators.

3. Major Modules:

1. Student Management
2. Attendance Management
3. Exam & Marks Management
4. Fee Management
5. Teacher Management
6. Timetable Management
7. Notice/Announcement System
8. Admin Panel

4. System Roles:

Admin – Full system control

Teacher – Attendance & marks management

Student – View attendance, results, and notices

5. Tools & Technologies:

Python + Django / Java Spring Boot / PHP + MySQL / MERN Stack

Database: MySQL / PostgreSQL / MongoDB

6. ER Diagram Overview:

Entities: Student, Teacher, Course, Subject, Attendance, Marks, Fee, Admin

Each entity contains attributes such as student_id, teacher_id, course_name, subject_name, attendance status, marks, fee status, etc.

7. Project Workflow:

1. Admin registers students & teachers.
2. Teachers log in to enter attendance and marks.
3. Students log in to view personalized academic data.
4. Admin publishes notices and generates reports.

8. Conclusion:

The Academic Management System improves efficiency, accuracy, and accessibility of educational data. It provides a centralized digital platform for managing academic operations and enhances communication between students, teachers, and administrators.
